The expression corners will refer to the lines in which any surfaces meet. Geometrically speaking, this would be incorrect; but mechanically--that is, in the language of the shop--it is not. The woods, white birch, cherry, red oak, and white wood, will be abbreviated, W. B. , C, R. O. , W. W. Their prices are: birch, about 5 per hundred; cherry, 7 per hundred; white wood, 4 to 6. Board measure is twelve inches square (surface measure) and one inch or less in thickness. The woods can be obtained in all thicknesses up to six inches, varying in each case by one fourth of an inch in thickness. The length varies from 12 to 16 feet. Standard lengths are 12, 13, 14, and 16 feet. Special lengths are 18 to 20 feet. The dimensions will be given in the inch and the metric system. In Sweden the latter is used. On all the drawings, the dimensions are stated in inches. The full dimensions do not always appear on the drawings, but they are given in the statements under each drawing. As the ordinary rule has no smaller dimension than one sixteenth of an inch, each number of millimeters is expressed in the nearest equivalent in inches and sixteenths of inches....
